DETAILED ACTION

The application should be reviewed for errors.

To facilitate processing of papers at the U.S. Patent and Trademark Office, it is recommended that the Application Serial Number be inserted on every page of claims and/or of amendments filed.

Applicant's election without traverse electing to prosecute the invention of Group I, claims 1-5 on 3/31/09 is acknowledged.

Claims 1-5 are being considered on the merits.

Claims 6-11 are withdrawn from consideration as directed to a non-elected invention.

It is noted that the microorganism(s) required to practice the claimed invention are currently available from Institute for Fermentation, Inc. and Institute of Molecular and Cellular Biosciences (Specification, page 5, paragraph 3). It appears that the microorganism(s) should remain available to the public beyond the effective life of the patent. Any information to the contrary which comes to applicants' attention during the prosecution of this application must be inserted into the record or otherwise be brought to the attention of the Office by applicants.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 5 fails to find proper antecedent basis in claim 1 for "the diglycosidase activity is... or more by dry weight". In claim 1 the composition is claimed as "being capable of producing diglycosidase". In addition, it is unclear what "dry weight" pertains to.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Tsuruhami *et al.* U.S. Patent No. 7,118,95)

The claims are directed to a composition comprising a fungus or a bacterium belonging to various genera, that is capable of producing diglycosidase, including the specific strains *A. fumigatus* IAM 2046, *A. niger* IAM 2020 and IAM 2047, and *Penicillium muticolor* IAM 7153..

Tsuruhami *et al.* discloses a composition comprising fungi or bacteria belonging to various genera, that is capable of producing diglycosidase, , including the specific strains *A. fumigatus* IAM 2046, *A. niger* IAM 2020 and IAM 2047 and *Penicillium muticolor* IAM 7153.
